CPU:

N/A [15]

[15] Multiple thread support is available for both backup and restore operation, resulting in increased processing power requirement and memory usage. It is recommended a client machine should be installed with multiple core processors with sufficient memory.

Additional Note:

Max number of threads available for backup and restore operation is determined by the number of logical CPU on the client machine, calculated with the following formula:

Max # of Threads = # of CPU x 2 (up to a maximum of 4 threads for backup and 8 threads for restore)

Memory: [16]

Minimum: 512 MB

Recommended: 1 GB or more

[16] 2GB RAM or more is recommended for better performance.

Installation Space:

Minimum: 300 MB

Network Protocol:

TCP/IP

Java Version:

Minimum: Java 1.5u22 [17]

Recommended: Java 1.6u23 or above

[17] Performance and stability is dependent on the operating system platforms and / or hardware architecture.
